Lab 6 test and output

First, run the server project, the driver.
I put one properties file in the server driver as default

Output:
Server is running now...

Then, run the client project, the driver, choose upload a properties file, toyota.

Output:
Handling session with localhost:8899
Please choose an operation:
        1. Upload Properties file.
        2. Configure a car.
        3. Enter # to quit.
1
Please input the property file name:
Toyota.properties
Building successfully.
Please choose an operation:
        1. Upload Properties file.
        2. Configure a car.
        3. Enter # to quit.
#
Finished.

Now we have 2 properties file in the server-end, start http.
Then choose ModelList, choose run on server.

Car Configuration
